THE PRELIMINARY TEXT OF THE PROPOSED RULE DEVELOPMENT IS:

40B-8.021 Definitions.

Unless the context indicates otherwise, the following terms shall have the following meanings:

(1) through (26) no change.

(27) “NAVD” means North American Vertical Datum of 1988.

(27) through (46) renumbered (28) through (47)

Rulemaking Authority 373.044, 373.113 FS. Law Implemented 373.042 FS. History—New 9-15-05, Amended 8-7-06, 7-29-07, 12-10-07, 6-27-16, 8-15-19, [DATE].

40B-8.121 Minimum Surface Water Levels for Lakes.

(1) The following terms, as used in this rule, shall have the following meanings:

(a) “Minimum Frequent High” means a chronically high surface water level or flow with an associated frequency and duration that allows for inundation of the floodplain at a depth and duration sufficient to maintain wetland functions.

(b) “Minimum Frequent Low” means a chronically low surface water level or flow that generally occurs only during periods of reduced rainfall. This level is intended to prevent deleterious effects to the composition and structure of

floodplain soils, the species composition and structure of floodplain and instream biotic communities, and the linkage of aquatic and floodplain food webs.

(c) "Seasonally Flooded" means a hydroperiod category where surface water is typically present for extended periods (30 days or more) during the growing season, resulting in a predominance of submerged or submerged and transitional wetland species. During extended periods of normal or above normal rainfall, lake levels causing inundation are expected to occur several weeks to several months every one to two years.

(d) "Semi-Permanently Flooded" means a hydroperiod category where surface water inundation persists in most years. When surface water is absent the water table is usually near the land surface. In many lakes with emergent marshes this water level is near the lower elevation that supports emergent marsh or floating vegetation and peat substrates, or other highly organic hydric substrates. This characterization may not be true for herbaceous wetlands around sandhill type lakes, which often have emergent vegetation that follows declining water levels to below the lower elevation of peat substrate. Water levels causing inundation are expected to occur approximately eighty percent of the time over a long term period of record. Exposure of these ground elevations is expected to re-occur, on average, about every five to ten years for extended periods (several or more months) during moderate droughts.

(2) The following minimum surface water levels are established:

Water Body Name	County (Latitude/Longitude)	Minimum Level (Feet NAVD)	Frequency	Hydroperiod Category	Seasonally Flooded	Duration (Days)	Return Interval (Years)
Lake Butler	Union (30°02'00"N/082°20'12"W)	Minimum Frequent High	29.55	Flooded	Seasonally Flooded	0	years (June 1 to May 31)

Water Body Name	County (Latitude/Longitude)	Minimum Level (Feet NAVD)	Frequency	Hydroperiod Category	Seasonally Flooded	Duration (Days)	Return Interval (Years)
		Minimum Frequent Low	27.30	Exposure	Semi-permanently Flooded	20	years (October 1 to September 30)

RULE NO.: 64B10-15.001
 RULE TITLE: Continuing Education for Licensure Renewal

PURPOSE AND EFFECT: The Board proposes a rule amendment to update the text to provide licensees with different options for obtaining continuing education credit.

SUMMARY: Update rule text with options for continuing education credit.

SUMMARY OF STATEMENT OF ESTIMATED REGULATORY COSTS AND LEGISLATIVE RATIFICATION:

The Agency has determined that this will not have an adverse impact on small business or likely increase directly or indirectly regulatory costs in excess of \$200,000 in the aggregate within one year after the implementation of the rule. A SERC has not been prepared by the Agency.

The Agency has determined that the proposed rule is not expected to require legislative ratification based on the statement of estimated regulatory costs or if no SERC is required, the information expressly relied upon and described herein: During discussion of the economic impact of this rule at its Board meeting, the Board concluded that this rule change will not have any impact on licensees and their businesses or the businesses that employ them. The rule will not increase any fees, business costs, personnel costs, will not decrease profit opportunities, and will not require any specialized knowledge to comply. This change will not increase any direct or indirect regulatory costs. Hence, the Board determined that a Statement of Estimated Regulatory Costs (SERC) was not necessary and that the rule will not require ratification by the Legislature. No person or interested party submitted additional information regarding the economic impact at that time.

Any person who wishes to provide information regarding a statement of estimated regulatory costs, or provide a proposal for a lower cost regulatory alternative must do so in writing within 21 days of this notice.

RULE NO.: RULE TITLE:

61C-1.004 General Sanitation and Safety Requirements

The Florida Department of Business and Professional Regulation, Division of Hotels and Restaurants hereby gives notice: On May 12, 2021 the Division of Hotels and Restaurants received a Petition for a Routine Variance for paragraph 61C-1.004(1)(a), Florida Administrative Code and Paragraph 5-202.11(A), 2017 FDA Food Code from DK DELRAY DOWNTOWN LLC located in Delray Beach. The above referenced F.A.C. addresses the requirement that each establishment have an approved plumbing system installed to transport potable water and wastewater. The Petitioner shall also ensure that the handwash sinks are provided with hot and cold running water under pressure, soap, an approved hand drying device and a handwashing sign.
