Section II

Proposed Rules

FISH AND WILDLIFE CONSERVATION COMMISSION

Marine Fisheries

RULE NOS.: **RULE TITLES:**
 68B-14.002 Definitions
 68B-14.005 Regulation and Prohibition of Certain Harvesting Gear: Allowable Gear, Incidental Bycatch, Violation

PURPOSE AND EFFECT: The Florida Fish and Wildlife Conservation Commission is modifying gear requirements for those fishing for reef fish from a vessel. Specifically, this rule would require the possession of a descending device or venting tool on board a vessel when harvesting or attempting to harvest (including catch and release) reef fish, and to require the use of such device/tool if releasing a reef fish that suffers from barotrauma. Release mortality is a top fisheries management challenge, and tools such as descending devices or venting tools can help fish recover from the effects of barotrauma, a pressure-related injury. To reduce release mortality, similar gear requirements have been adopted in adjacent federal waters.

The purpose of these rule changes is to help improve survival of released reef fish, promote best fishing practices, and increase compliance with existing regulations in federal waters.

The effect of the rule amendments is to require the possession and appropriate use of descending devices or venting tools when fishing for reef fish from a vessel in Florida state waters.

The purpose of these rule changes is to help improve survival of released reef fish, promote best fishing practices, and increase compliance with existing regulations in federal waters.

The effect of the rule amendments is to require the possession and appropriate use of descending devices or venting tools when fishing for reef fish from a vessel in Florida state waters. SUMMARY: These rule amendments modify gear requirements for commercial and recreational fishermen fishing for reef fish in state waters. Similar gear regulations when fishing for reef fish exist in adjacent Gulf and South Atlantic federal waters.

SUMMARY OF STATEMENT OF ESTIMATED REGULATORY COSTS AND LEGISLATIVE RATIFICATION:

The Agency has determined that this will not have an adverse impact on small business or likely increase directly or indirectly regulatory costs in excess of \$200,000 in the aggregate within one year after the implementation of the rule. A SERC has not been prepared by the Agency.

The Agency has determined that the proposed rule is not expected to require legislative ratification based on the statement of estimated regulatory costs or if no SERC is required, the information expressly relied upon and described herein:

Any person who wishes to provide information regarding a statement of estimated regulatory costs, or provide a proposal for a lower cost regulatory alternative must do so in writing within 21 days of this notice.

68B-14.002 Definitions.

For purposes of this chapter, except where the context clearly requires otherwise:

(1) through (2) No change.

(3) “Barotrauma” means a pressure related injury (signs include protruding stomach, bulging eyes, bloated belly, distended intestines) that fish can experience when brought up from depth.

(4) “Descending device” means an instrument capable of releasing a fish at a depth sufficient for the fish to be able to recover from the effects of barotrauma.

(5)(3) “Goliath grouper” means any fish of the species *Epinephelus itajara*, or any part thereof.

(6)(4) “Gulf of Mexico” means that body of water north and west of the line described in the definition of “Atlantic Ocean” contained in subsection (1) of this rule.

(7)(5) “Harvest for commercial purposes” means the taking or harvesting of fish for purposes of sale or with intent to sell or in excess of established bag limits.

(8)(6) “Headboat” means a vessel that holds a valid Certificate of Inspection issued from the U.S. Coast Guard to carry passengers for hire when it carries a passenger who pays a fee or when there are more than three persons aboard, including operator and crew.

(9) “Venting tool” means a device designed to penetrate the swim bladder of a fish to release the excess gases accumulated in the body cavity when a fish is retrieved from depth.

(a) A venting tool is a sharpened, hollow instrument that allows air to escape. A 16-gauge needle, which has an outside diameter of 0.065 inches (1.65 mm), is the minimum diameter hollow tube allowable. A larger diameter hollow needle is preferred to allow air to escape more rapidly from the fish’s swim bladder.

(b) A device that is not hollow, such as a knife or an ice pick, is not a venting tool and may not be used as it would cause additional damage to a fish.

harvester must use a venting tool to release gases from the swim bladder of the fish or a descending device to quickly return the fish to depth. The descending device or venting tool must be properly assembled and ready for use prior to harvest or attempting to harvest. The descending device must not be stowed and all tools shall be easily within reach to quickly release a fish that is exhibiting signs of barotrauma.
