RULE TITLE: RULE NO.: Permit Thresholds 40E-4.0415

PURPOSE AND EFFECT: The SFWMD is amending the existing environmental resource permit thresholds rule to specify that ditches and wholly owned ponds constructed in uplands and any isolated wetlands with a surface area of less than 0.5 acres will not be included in the calculation of acreage of "impacts to wetlands and other surface waters" for purposes

of determining whether a project exceeds the one acre impact threshold for Standard General Permits. Additionally, the SFWMD is creating a new section in the environmental resource permit thresholds rule (40E-4.0415(b)(3)) to allow phases of a project that have a valid environmental resource/surface water management conceptual permit to be permitted at the staff level provided that the specific phase is constructed and operated consistently with the original conceptual approval.

SUBJECT AREA TO BE ADDRESSED: The proposed rule amendments will amend the existing permit thresholds that are a determinative factor in size threshold calculations and eliminate the need for subsequent phased projects to be approved by the Governing Board provided that the original Conceptual Approval permit was issued by the Governing Board and the phased project is consistent with the Conceptual Permit.

SPECIFIC AUTHORITY: 373.044, 373.113, 373.406(5) FS.

LAW IMPLEMENTED: 373.118(1), 373.413(1) FS.

- (b) Phases within a conceptually approved project shall be processed as standard general permits provided:
- 1. The proposed activity is consistent with the conceptual approval permit;
- 2. The approved conceptual plan includes the location and acreage of wetlands onsite, an assessment of wetland impacts, and a conceptual mitigation plan (if required); and

### 4.2.8.1 Cumulative Impacts.

Cumulative impacts are considered unacceptable when the proposed system, considered in conjunction with the past, present, and future activities as described in 4.2.8, as set forth in subsection 4.1.1(c), would result in a violation of state water quality standards or significant adverse impacts to functions of wetlands or other surface waters, identified in subsection 4.2.2, within the same drainage basin when considering the basin as a whole. However, whenever mitigation located within the same drainage basin fully offsets the proposed impacts to wetland functions as described in section 4.2.2 and to water quality, then the regulated activity does not result in unacceptable cumulative impacts within the same drainage basin.

#### 4.2.8 Cumulative Impacts

Pursuant to paragraph 4.1.1(g), an applicant must provide reasonable assurances that a regulated activity will not cause unacceptable cumulative impacts upon wetlands and other surface waters within the same drainage basin as the regulated activity for which a permit is sought. The impact on wetlands and other surface waters shall be reviewed by evaluating the impacts to water quality as set forth in subsection 4.1.1(c) and by evaluating the impacts to functions identified in subsection 4.2.2. If an applicant proposes to mitigate these adverse impacts within the same drainage basin as the impacts, and if the mitigation fully offsets these impacts, the District will consider the regulated activity to have no unacceptable cumulative impacts upon wetlands and other surface water, and consequently the condition for issuance in paragraph xxx, will be satisfied. The drainage basins within the District are identified on Figure 4.2.8-1.

When adverse impacts to water quality or adverse impacts to the functions of wetlands and other surface water, as referenced in the paragraph above, are not fully offset within the same drainage basin as the impacts, then aAn applicant must provide reasonable assurance that the proposed system, when considered with the following activities, will not result in unacceptable cumulative impacts to water quality or the functions of wetlands and other surface waters, within the same drainage basin:

(a) through (b) No change.

Only Tthose activities listed in paragraphs (a) and (b) which have similar types of adverse impacts to those which will be caused by the proposed system will be considered. (All citations in paragraphs (a) and (b) refer to provisions of Florida Statutes.)

Whenever mitigation located within the same drainage basin fully offsets the proposed impacts to wetland functions as described in section 4.2.2 and to water quality, then the regulated activity does not result in unacceptable cumulative impacts within the same drainage basin.

The cumulative impact evaluation is conducted using an assumption that reasonably expected future applications with like impacts will be sought, thus necessitating equitable distribution of acceptable impacts among future applications.

RULE TITLE: RULE NO.: Permit Thresholds 40E-40.041

PURPOSE AND EFFECT: The SFWMD is amending the existing permit thresholds for environmental resource standard general permits rule to specify that ditches and wholly owned ponds constructed in uplands and any isolated wetlands with a surface area of less than 0.5 acres will not be included in the calculation of acreage of "impacts to wetlands and other surface waters" for purposes of determining whether a project exceeds the one acre impact threshold for Standard General Permits. Additionally, the SFWMD is creating a new section in the existing permit thresholds for environmental resource standard general permits Rule (40E-40.041(3)(b)) to allow phases of a project that have a valid environmental resource/ surface water management conceptual permit to be permitted at the staff level provided that the specific phase is constructed and operated consistently with the original conceptual approval.

SUBJECT AREA TO BE ADDRESSED: The proposed rule amendments will amend the existing permit thresholds for environmental resource standard general permits that are a determinative factor in size threshold calculations and eliminate the need for subsequent phased projects to be approved by the Governing Board provided that the original Conceptual Approval permit was issued by the Governing Board and the phased project is consistent with the Conceptual Permit.

The stabilization of eroded sections of ditches currently requires a standard general or individual permit if materials such as riprap, concrete, or geotechnical textiles are utilized. Mitigation is not normally required for this type of activity. Permitting of these types of projects will be more appropriately regulated under a noticed general permit.

SUBJECT AREA TO BE ADDRESSED: The proposed rule amendments will amend the existing noticed general permit to governmental entities for the construction of minor activities in existing rights-of-way or easements to include ditch stabilization projects in 40E-400.447, F.A.C.

PURPOSE AND EFFECT: The purpose of this proposed rule amendment is to amend the boundaries of the Indigo Community Development District ("District"), a community development district (CDD) established pursuant to Chapter 190, F.S. will consist of approximately 2,513 acres. The contraction parcel is generally located East of Tomoka River and South of the 234 foot Florida Power & Light easement recorded in official records of Volusia County at Book 511, page 86, and Book 1335, Page 500. There are no out parcels within the contraction parcel, or the proposed amended boundaries of the District, that are to be excluded from the Indigo CDD as a result of the contraction. The filing of the contraction petition by the Board of Supervisors of the Indigo CDD constitutes consent of the landowners within the District. Additionally, the District has written consent to amend the District from the owners of 100% of the real property to be deleted from the District.
