RULE NO.: 40E-2.091 RULE TITLE:
 Publications Incorporated by
 Reference

NOTICE OF CHANGE

In accordance with subparagraph 120.54(3)(d)1., F.S., notice is hereby given that changes were made to Sections 2.3.9, 2.3.10, 3.3.2, 3.3.7, and 5.1(1) of the “Basis of Review for Water Use Permit Applications Within the South Florida Water Management District – August 2002” incorporated by reference Rule 40E-2.091, F.A.C., which proposed rules were published in Vol. 29, No. 17, pages 1681-1683, of the April 25, 2003, issue of the Florida Administrative Weekly, and adopted, with these changes, by the South Florida Water Management District’s Governing Board at a public hearing on June 12, 2003. The changes to the “Basis of Review” incorporated into the April 25, 2003 notice, is posted on the SFWMD Website at www.sfwmd.gov.

In response to written material received from the regulated community before the date of the final public hearing, the following changes were made to the “Basis of Review for Water Use Permit Applications within the South Florida Water Management District”, incorporated by reference in Rule 40E-2.091, F.A.C.:

2.3.9 Drainage Districts

Applicants for an individual or general permit who are dependant users pursuant to Section 2.7.3.A. and are supplied water by a permitted Drainage or Water Control District do not need to be permitted separately for supplemental quantities unless there is a change in the withdrawal source for which the Drainage or Water Control District has no authority or permission to use. The allocation of the supply from the additional source will be authorized through the issuance of a separate permit specific to the new source classification.

2.3.10 Micro Irrigated Citrus

The annual allocation for micro irrigated citrus will be calculated using methodology and coefficients described in Section 2.3.2. The maximum month allocation will be defined by the highest month value for full evapotranspiration for either March, April or May, as determined using the methodology in Section 2.3.2. In the event that the allocation calculated by this methodology is insufficient to meet the supplemental irrigation requirements of an applicant’s grove under a 1 in 10 year drought condition, the applicant may apply for an allocation in excess of the allocation calculated by Section 2.3.2. In such circumstances, the applicant must affirmatively demonstrate the need for a higher allocation by

provision of information such as: site specific soil hydrologic characteristics, depth to the water table, salinity of irrigation water (when additional water is needed to flush salts from the soil), calibrated historic pumpage data, or the results from an on-site irrigation efficiency evaluation conducted by a qualified irrigation auditor, such as a Mobile Irrigation Lab. In the event the irrigation water exceeds 1200 ~~1800~~ milligrams per liter total dissolved solids, the maximum month allocation will be increased to include 1 inch of water for the purposes of flushing accumulated salts from the soil.

3.3.2. Permit Application Submittals

The following shall be included in the applicant’s submittal: (A through G No change).

H. If the applicant asserts the exclusions in Sections 3.3.1.B.2 or 3.3.1.B.4. or considerations in Section 3.3.7 apply to wetlands or other surface waters within the cone of influence of the proposed water use, the applicant must provide appropriate information supporting this assertion, including relevant information from the permit file. ~~If the applicant asserts a previously issued District permit authorized impacts to a wetland or other surface water, did not protect a wetland or other surface water, or authorized mitigation for impacts to a wetland or other surface water, the applicant must provide appropriate information from the permit file supporting this assertion.~~

3.3.7 Consideration of Elimination or Reduction, and Mitigation of Harm, for Consumptive Use Permit Renewals

In addition to the considerations in Sections 3.3.5 and 3.3.6, for renewal of a consumptive use permit, the determination of whether elimination or reduction, and mitigation, will be required for impacts to wetlands or other surface waters not identified or expressly authorized to be impacted, by the previous consumptive use permit, shall be made considering the following:

- A. The existing wetland and surface water functions;
 - B. The degree to which the wetland or other surface water functions are reasonably expected to recover if the withdrawal is reduced or eliminated;
 - C. The projected impacts on the existing functions of the wetlands or other surface waters from continuing the water use;
 - D. Whether the wetland or other surface water is connected by standing or flowing surface water to, or is part of, an Outstanding Florida Water, Aquatic Preserve, state park, or other publicly owned conservation land with significant ecological value; and
 - E. As part of the fish and wildlife utilization considerations in subsections A, B, and C., above, special consideration shall be given to whether the wetland or other surface water is used for resting, nesting, breeding, feeding or denning by listed species.
- ~~In addition to the considerations in Sections 3.3.5 and 3.3.6, for renewal of a consumptive use permit, the determination of whether elimination or reduction, and mitigation, will be~~

~~required for impacts to wetlands or other surface waters not identified, or authorized for impact, by the previous consumptive use permit, shall be made considering the following:~~

- ~~A. The projected impacts on wetlands or other surface waters from continuing the water use in comparison to the remaining functions of the wetlands or other surface waters;~~
- ~~B. Whether the wetland or other surface water is connected by standing or flowing surface water to, or is part of, an Outstanding Florida Water, Aquatic Preserve, state park, or other publicly owned conservation land; and~~
- ~~C. Whether the wetland or other surface water is used for resting, nesting, breeding, feeding or denning by fish and wildlife, particularly listed species.~~

5.1 Standard Permit Conditions

(A. through H. No change.)

I. Permittee shall mitigate harm to existing off-site land uses caused by the permittee’s withdrawals, as determined through reference to the conditions for permit issuance. When harm occurs, or is imminent, the District will require the permittee to modify withdrawal rates or mitigate the harm. Harm as determined through reference to the conditions for permit issuance, includes:

- (1) Significant reduction in water levels on the property to the extent that the designed function of the water body and related surface water management improvements are damaged; not including aesthetic values; The designed function of a water body is identified in the original permit or other governmental authorization issued for the construction of the water body. In cases where a permit was not required, the designed function shall be determined based on the purpose for the original construction of the water body (e.g. fill for construction, mining, drainage canal etc.).
- (2) Damage to agriculture, including damage resulting from reduction in soil moisture resulting from consumptive use; or
- (3) Land collapse or subsidence caused by reduction in water levels associated with consumptive use.
